1. What Eliquis Tablet (Apixaban Tablet)is and what it is used for

Eliquis Tablet (Apixaban Tablet) contains the active substance apixaban and belongs to a group of medicines called anticoagulants. This medicine helps to prevent blood clots from forming by blocking Factor Xa, which is an important component of blood clotting.

Eliquis Tablet (Apixaban Tablet) is used in adults:
- to prevent blood clots (deep vein thrombosis [DVT]) from forming after hip or knee replacement operations. After an operation to the hip or knee you may be at a higher risk of developing blood clots in your leg veins. This can cause the legs to swell, with or without pain. If a blood clot travels from your leg to your lungs, it can block blood flow causing

breathlessness, with or without chest pain. This condition (pulmonary embolism) can be life-threatening and requires immediate medical attention.
- to prevent a blood clot from forming in the heart in patients with an irregular heart beat (atrial fibrillation) and at least one additional risk factor. Blood clots may break off and travel to the brain and lead to a stroke or to other organs and prevent normal blood flow to that organ (also known as a systemic embolism). A stroke can be life-threatening and requires immediate medical attention.
- to treat blood clots in the veins of your legs (deep vein thrombosis) and in the blood vessels of your lungs (pulmonary embolism), and to prevent blood clots from re-occurring in the blood vessels of your legs and/or lungs.

2. What you need to know before you take Eliquis Tablet (Apixaban Tablet)

Do not take Eliquis Tablet (Apixaban Tablet) if:
- **you are allergic** to apixaban or any of the other ingredients of this medicine (listed in section 6);
- you are **bleeding excessively**;
- you have a **disease in an organ** of the body that increases the risk of serious bleeding (such as **an active or a recent ulcer** of your stomach or bowel, **recent bleeding in your brain**);
- you have a **liver disease** which leads to increased risk of bleeding (hepatic coagulopathy);
- you are **taking medicines to prevent blood clotting** (e.g., warfarin, rivaroxaban, dabigatran or heparin), except when changing anticoagulant treatment, while having a venous or arterial line and you get heparin through this line to keep it open, or if a tube is inserted into your blood vessel (catheter ablation) to treat an irregular heartbeat (arrhythmia).

Warnings and precautions
Talk to your doctor before you take this medicine if you have any of the following:
- an **increased risk of bleeding**, such as:
  - **bleeding disorders**, including conditions resulting in reduced platelet activity;
  - **high blood pressure**;
  - you are older than 65 years;
- a **severe kidney disease or if you are on dialysis**;
- a **liver problem or a history of liver problems**;
  - This medicine will be used with caution in patients with signs of altered liver function.
- **had a tube (catheter) or an injection into your spinal column** (for anaesthesia or pain reduction), your doctor will tell you to take this medicine 5 hours or more after catheter removal;
- if you have a **prosthetic heart valve**;
- if your doctor determines that your blood pressure is unstable or another treatment or surgical procedure to remove the blood clot from your lungs is planned.

Take special care with Eliquis Tablet (Apixaban Tablet)oif you know that you have a disease called antiphospholipid syndrome (a disorder of the immune system that causes an increased risk of blood clots), tell your doctor who will decide if the treatment may need to be changed.

If you need to have surgery or a procedure which may cause bleeding, your doctor might ask you to temporarily stop taking this medicine for a short while. If you are not sure whether a procedure may cause bleeding ask your doctor.

Children and adolescents
This medicine is not recommended in children and adolescents under 18 years of age.

Other medicines and Eliquis Tablet (Apixaban Tablet)
Tell your doctor if you are taking, have recently taken or might take any other medicines.

Some medicines may increase the effects of Eliquis Tablet (Apixaban Tablet) and some may decrease its effects. Your doctor will decide, if you should be treated with Eliquis Tablet (Apixaban Tablet) when taking these medicines and how closely you should be monitored.

The following medicines may increase the effects of Eliquis Tablet (Apixaban Tablet) and increase the chance for unwanted bleeding:
- some **medicines for fungal infections** (e.g., ketoconazole, etc.);
- some **antiviral medicines for HIV / AIDS** (e.g., ritonavir);
- other **medicines that are used to reduce blood clotting** (e.g., enoxaparin, etc.);
- **anti-inflammatory** or **pain medicines** (e.g., acetylsalicylic acid or naproxen). Especially, if you are older than 65 years and are taking acetylsalicylic acid, you may have an increased chance of bleeding;
- **medicines for high blood pressure or heart problems** (e.g., diltiazem);
- **antidepressant medicines** called **selective serotonin re-uptake inhibitors** or **serotonin norepinephrine re-uptake inhibitors**.

The following medicines may reduce the ability of Eliquis Tablet (Apixaban Tablet) to help prevent blood clots from forming:
- **medicines to prevent epilepsy or seizures** (e.g., phenytoin, etc.);
- **St John's Wort** (a herbal supplement used for depression);
- **medicines to treat tuberculosis** or **other infections** (e.g., rifampicin).

Pregnancy and breast-feeding
If you are pregnant or breast-feeding, think you may be pregnant or are planning to have a baby, ask your doctor for advice before taking this medicine.

The effects of Eliquis Tablet (Apixaban Tablet) on pregnancy and the unborn child are not known. You should not take this medicine if you are pregnant. **Contact your doctor immediately** if you become pregnant while taking this medicine.

It is not known if Eliquis Tablet (Apixaban Tablet) passes into human breast milk. Ask your doctor for advice before taking this medicine while breast-feeding. They will advise you whether to stop breast-feeding or to stop/not start taking this medicine.

Driving and using machines
Eliquis Tablet (Apixaban Tablet) has not been shown to impair your ability to drive or use machines.

Eliquis Tablet (Apixaban Tablet) contains lactose (a type of sugar)
If you have been told by your doctor that you have an intolerance to some sugars, contact your doctor before taking this medicine.

3. How to take Eliquis Tablet (Apixaban Tablet)

Always take this medicine exactly as your doctor has told you. Check with your doctor if you are not sure.

Dose
Swallow the tablet with a drink of water. Eliquis Tablet (Apixaban Tablet) can be taken with or without food.
Try to take the tablets at the same times every day to have the best treatment effect.

If you have difficulty swallowing the tablet whole, talk to your doctor about other ways to take Eliquis Tablet (Apixaban Tablet). The tablet may be crushed and mixed with water, or 5% glucose in water, or apple juice or apple puree, immediately before you take it.

Instructions for crushing
- Crush the tablets with a pestle and mortar.
- Transfer all the powder carefully into a suitable container then mix the powder with a little e.g., 30 mL (2 tablespoons), water or one of the other liquids mentioned above to make a mixture.
- Swallow the mixture.
- Rinse the pestle and mortar you used for crushing the tablet and the container, with a little water or one of the other liquids (e.g., 30 mL), and swallow the rinse.

If necessary, your doctor may also give you the crushed Eliquis Tablet (Apixaban Tablet) tablet mixed in 60 mL of water or 5% glucose in water, through a nasogastric tube.

Take Eliquis Tablet (Apixaban Tablet) as recommended for the following:

<u>To prevent blood clots from forming after hip or knee replacement operations</u>
The recommended dose is one tablet of Eliquis Tablet (Apixaban Tablet) **2.5 mg** twice a day. For example, one in the morning and one in the evening.

You should take the first tablet 12 to 24 hours after your operation.

If you have had a major **hip** operation you will usually take the tablets for 32 to 38 days.

If you have had a major **knee** operation you will usually take the tablets for 10 to 14 days.

To prevent a blood clot from forming in the heart in patients with an irregular heart beat and at least one additional risk factor
The recommended dose is one tablet of Eliquis Tablet (Apixaban Tablet) **5 mg** twice a day.

The recommended dose is one tablet of Eliquis Tablet (Apixaban Tablet) **2.5 mg** twice a day if **two or more of the following apply to you:**

- your blood test results suggest poor kidney function (value of serum creatinine is 1.5 mg/dL (133 micromole/L) or greater);
- you are 80 years old or older;
- your weight is 60 kg or lower.

The recommended dose is one tablet twice a day, for example, one in the morning and one in the evening. Your doctor will decide how long you must continue treatment for.

To treat blood clots in the veins of your legs and blood clots in the blood vessels of your lungs
The recommended dose is **two tablets** of Eliquis Tablet (Apixaban Tablet) **5 mg** twice a day for the first 7 days, for example, two **5 mg tablets** in the morning and two **5 mg tablets** in the evening.

After 7 days the recommended dose is **one tablet** of Eliquis Tablet (Apixaban Tablet) **5 mg** twice a day, for example, one 5mg tablet in the morning and one 5mg tablet in the evening.

For preventing blood clots from re-occurring following completion of 6 months of treatment
The recommended dose is one tablet of Eliquis Tablet (Apixaban Tablet) **2.5 mg** twice a day for example, one 2.5mg tablet in the morning and one 2.5mg tablet in the evening.

Your doctor will decide how long you must continue treatment for.

Your doctor might change your anticoagulant treatment as follows:

Changing from Eliquis Tablet (Apixaban Tablet) to anticoagulant medicines
Stop taking Eliquis Tablet (Apixaban Tablet). Start treatment with the anticoagulant medicines (for example heparin) at the time you would have taken the next tablet.

Changing from anticoagulant medicines to Eliquis Tablet (Apixaban Tablet)
Stop taking the anticoagulant medicines. Start treatment with Eliquis Tablet (Apixaban Tablet) at the time you would have had the next dose of anticoagulant medicine, then continue as normal.

Changing from treatment with anticoagulant containing vitamin K antagonist (e.g., warfarin) to Eliquis Tablet (Apixaban Tablet)
Stop taking the medicine containing a vitamin K antagonist. Your doctor needs to do blood-measurements and instruct you when to start taking Eliquis Tablet (Apixaban Tablet).

Changing from Eliquis Tablet (Apixaban Tablet) to anticoagulant treatment containing vitamin K antagonist (e.g., warfarin)
If your doctor tells you that you have to start taking the medicine containing a vitamin K antagonist, continue to take Eliquis Tablet (Apixaban Tablet) for at least 2 days after your first dose of the medicine containing a vitamin K antagonist. Your doctor needs to do blood-measurements and instruct you when to stop taking Eliquis Tablet (Apixaban Tablet).

Patients undergoing cardioversion
If your abnormal heartbeat needs to be restored to normal by a procedure called cardioversion, take this medicine at the times your doctor tells you, to prevent blood clots in blood vessels in your brain and other blood vessels in your body.

Surgery and invasive procedures
If you need to have surgery or a procedure which may cause bleeding, your doctor might ask you to temporarily stop taking this medicine for a short while. If you are not sure whether a procedure may cause bleeding ask your doctor.

If you take more Eliquis Tablet (Apixaban Tablet) than you should
Tell your doctor immediately if you have taken more than the prescribed dose of this medicine. Take the medicine pack with you, even if there are no tablets left.

If you take more Eliquis Tablet (Apixaban Tablet) than recommended, you may have an increased risk of bleeding. In the event of bleeding complications, initiation of appropriate treatment e.g., stop the bleeding surgically or transfusion of blood products like fresh frozen plasma might be required.

If you forget to take Eliquis Tablet (Apixaban Tablet)
Take the dose as soon as you remember and:
- take the next dose of Eliquis Tablet (Apixaban Tablet) at the usual time
- then continue as normal.

If you are not sure what to do or have missed more than one dose
Ask your doctor.

If you stop taking Eliquis Tablet (Apixaban Tablet)
Do not stop taking this medicine without talking to your doctor first, because the risk of developing a blood clot could be higher if you stop treatment too early.

If you have any further questions on the use of this medicine, ask your doctor.

4. Possible side effects

Like all medicines, this medicine can cause side effects, although not everybody gets them. Eliquis Tablet (Apixaban Tablet) can be given for three different medical conditions. The known side effects and how frequently they occur for each of these medical conditions may differ and are listed separately below. For these conditions, the most common general side effect of this medicine is bleeding which may be potentially life threatening and require immediate medical attention.

The following side effects are known if you take Eliquis Tablet (Apixaban Tablet) to prevent blood clots from forming after hip or knee replacement operations.

Common side effects (may affect up to 1 in 10 people)
- Anaemia which may cause tiredness or paleness;
- Bleeding including:
  - bruising and swelling;
- Nausea (feeling sick).

Uncommon side effects (may affect up to 1 in 100 people)
- Reduced number of platelets in your blood (which can affect clotting);
- Bleeding:
  - occurring after your operation including bruising and swelling, blood or liquid leaking from the surgical wound/incision (wound secretion) or injection site;
  - in your stomach, bowel or bright/red blood in the stools;
  - blood in the urine;
  - from your nose;
  - from the vagina;
- Low blood pressure which may make you feel faint or have a quickened heartbeat;
- Blood tests may show:
  - abnormal liver function;
  - an increase in some liver enzymes;
  - an increase in bilirubin, a breakdown product of red blood cells, which can cause yellowing of the skin and eyes;
- Itching.

Rare side effects (may affect up to 1 in 1,000 people)
- Allergic reactions (hypersensitivity) which may cause: swelling of the face, lips, mouth, tongue and/or throat and difficulty breathing. **Contact your doctor immediately** if you experience any of these symptoms.
- Bleeding:
  - into a muscle;
  - in your eyes;
  - from your gums and blood in your spit when coughing;
  - from your rectum;
- Hair loss.

Not known (frequency cannot be estimated from the available data)
- Bleeding:
  - in your brain or in your spinal column;
  - in your lungs or your throat;
  - in your mouth;
  - into your abdomen or space behind your abdominal cavity;
  - from a haemorrhoid;
  - tests showing blood in the stools or in the urine;
- Skin rash which may form blisters and looks like small targets (central dark spots surrounded by a paler area, with a dark ring around the edge) *(erythema multiforme)*;
- Rapid swelling under the skin in areas such as the face, throat, arms and legs, which can be life threatening in throat swelling blocks the airway;
- Blood vessel inflammation (vasculitis) which may result in skin rash or pointed, flat, red, round spots under the skin's surface or bruising;
- Bleeding in the kidney sometimes with presence of blood in urine leading to inability of the kidneys to work properly (anticoagulant-related nephropathy).

The following side effects are known if you take Eliquis Tablet (Apixaban Tablet) to prevent a blood clot from forming in the heart in patients with an irregular heart beat and at least one additional risk factor.

Common side effects (may affect up to 1 in 10 people)
- Bleeding including:
  - in your eyes;
  - in your stomach or bowel;
  - from your rectum;
